

Training for Nepra officials

ISLAMABAD (INP): The EU Switch Asia's HP Cogen Pak Project organized a specialized capacity building program for NEPRA officials. The purpose of the two-week training held at Islamabad was to enhance the understanding of NEPRA officials regarding power generation and distribution systems, utilization of different type of fuels and renewable energy for power generation, power generating system regulations and technicalities. The course was mainly based on the technical and regulatory aspects of power generation and transmission systems. In the first week, modes of conventional and renewable power generation (biomass, solar, wind and hydropower) were discussed in detail. The HPCogen pak experts shared their experiences of power generation in India and highlighted the best practices and policy drivers for the success of RE in Asia which could be replicated in Pakistan.
